SKILLS

Frontend

ReactJS · JavaScript · TypeScript · API Integration · GraphQL · Zustand · Next.js · Vite · ESLint · Redux · HTML5 · Responsive Web · ES6

UI & Styling

Tailwind CSS · Bootstrap · Less · CSS3

Backend & Cloud

Node.js · FastAPI · Python · Firebase · NoSQL · PostgreSQL · Cloud SQL · Google BigQuery · Google Cloud Run · Google Pub/Sub

Mobile

Capacitor · Ionic · PWA

DevOps

Git · Argo · Jenkins · CI/CD · GitHub Actions · Agile · Jira

Data & Mapping

HighCharts · Chart.js · D3.js · Google Maps API · Geofencing API · Markers · Clusters · Leaflet

Tools AI & LLM Integration

GitHub CoPilot · AI-Assisted Dev · Cursor · OpenAI APIs · Prompt Engineering

JEEVAN PRABHATH PENDEM

TECHNICAL LEAD | IOT & SCADA SYSTEMS | REMOTE OPERATIONS | AI-NATIVE FULL-STACK ENGINEER | 15 YEARS EXPERIENCE | REACT, SMART DEVICES & INDUSTRIAL PLATFORMS

SUMMARY

Highly accomplished **Senior Technical Lead & IoT Platform Engineer** with 15 years of expertise building industrial IoT dashboards, SCADA-style supervisory interfaces, and remote device operation platforms at scale. Spent 10+ years at **ORBCOMM**, a global asset-tracking device company that operates its own satellite network to monitor fleets, cargo, and industrial assets in remote and off-grid locations where cellular coverage is unavailable. Proven track record architecting real-time telemetry visualization, **two-way command interfaces** (uplink/downlink over satellite and cellular), alarm/event management, and fleet telematics for bidirectional device communication. Equally skilled in modernizing legacy IoT frontends, integrating LLM-assisted diagnostics into operational tooling, and leading cross-functional teams delivering mission-critical remote monitoring solutions.

PROFESSIONAL EXPERIENCE

Orbcomm India Pvt Ltd — 2015 - Feb 2026

Technical Lead

Asset-tracking hardware & connectivity provider — proprietary satellites plus cellular for global device visibility. Built supervisory platforms with **two-way device commands** (send, track, acknowledge); led teams of **3 to 5** across frontend engineering, telemetry UX, and remote control interfaces.

Project: The Orbcomm Platform — Industrial IoT & SCADA Dashboard

- Spearheaded architectural design of a supervisory IoT dashboard delivering SCADA-style real-time monitoring of connected assets, sensor telemetry, and operational KPIs across high-frequency data streams.
- Built live trend charts, alarm panels, and event timelines enabling operators to supervise device health, issue two-way remote commands, and respond to threshold breaches without on-site intervention.
- Implemented WebSocket-driven data layers and optimized rendering pipelines to handle bursty telemetry from thousands of remote endpoints with minimal UI latency.

Project: Device Cloud — Remote Device Operations & Smart Thing Management

- Acted as Module Lead for a 3–5 member team engineering a centralized cloud console for remote provisioning, configuration, firmware updates, and two-way command dispatch to field-deployed IoT devices.
- Developed bidirectional command workflows — operators send instructions over satellite/cellular, track delivery status, and receive device acknowledgments and response payloads in real time.
- Built SCADA-adjacent control panels for OTA parameter changes, device grouping, bulk remote operations, and audit-tracked two-way command lifecycles with handshake and retry handling.

Project: eSolutions 2 & FleetEdge 4 — Fleet Telematics & Remote Tracking

- Led frontend development for fleet telematics platforms enabling remote visibility into vehicle location, trip history, driver behavior, and asset status across distributed operations.
- Implemented Google Maps API integrations with advanced clustering, live geofencing, and rule-based alert triggers for remote supervisory monitoring of mobile assets.
- Delivered operator dashboards for real-time fleet health, exception handling, and remote dispatch support used by logistics and cold-chain monitoring teams.

Internal IoT Developer Productivity & Platform Tools

- **API Health & Performance Monitor:** Built an automated tool processing API manifests to trigger real-time health checks across IoT backend services, surfacing latency and availability bottlenecks in device-ingestion pipelines.
- **Auth0 Data Management Utility:** Developed batch tooling for remote-access user provisioning and role management across multi-tenant IoT operator portals.

Core Stack Utilized: *ReactJS, Next.js, TypeScript, Vite, Zustand, Redux Toolkit, WebSockets, MQTT, Google Maps API, D3.js, HighCharts, Google Pub/Sub, Node.js, HTML5, CSS3.*

IOT & INDUSTRIAL SYSTEMS

IoT Platforms & Connectivity

IoT Platforms | MQTT | WebSockets | Real-time Streaming | Satellite IoT | Cellular IoT | Two-Way Commands | M2M Communication

SCADA & Remote Operations

Telemetry Dashboards | Remote Operations | Alarm & Event Mgmt | Remote Config / OTA | Device Provisioning

Fleet & Asset Tracking

Asset Tracking | Fleet Telematics | Device Management | Cold Chain Monitoring | Geofencing

LANGUAGES

English
Hindi
Telugu

SOFT SKILLS

- Team Leadership (3–5 members)
- High learnability
- Attention to detail
- Problem solving
- Curiosity
- Cross-functional Collaboration

Verizon Data Services India Pvt Ltd — 2012 - 2014

Senior Software Engineer

Project: Access Provisioning Control

- Developed enterprise-level identity and access management software within a collaborative 35-member engineering team.
- Engineered highly adaptive internal administrative panel views using robust enterprise modular components.

Core Stack Utilized: *HTML5, CSS3, RWD, Bootstrap, Less, jQuery, JavaScript, and ExtJs.*

Microsoft — 01/2012 - 07/2012

UI Developer

Project: Windows 8 Weather and News Ecosystem

- Designed client layout modules for core native Windows 8 default applications, successfully serving a global user base of millions.
- Optimized real-time dynamic rendering feeds and maintained pixel-perfect rendering speeds under content-heavy payloads.

INDEPENDENT MOBILE & AI INITIATIVES/FREELANCER

World Atlas & Country Info App — PLAY STORE

Tech Stack: React, TypeScript, Ionic 7, Capacitor, Leaflet, Google BigQuery, PostgreSQL, Cloud SQL

- Engineered an interactive mobile application leveraging **Cloud SQL** for relational data and **Google BigQuery** for geospatial analytics.

Bible Chronos Genealogy — PLAY STORE

Tech Stack: React, TypeScript, Leaflet, D3.js, Ionic 7, Capacitor

- Developed responsive layout layers to render intricate historical data timelines over synchronized interactive mapping layers.

Personal Conversational AI Assistant Platform — LAB PROJECT

Tech Stack: React, FastAPI, Python, Google Cloud Run, Firebase, NoSQL, Pub/Sub

- Architected an end-to-end AI-powered voice assistant using **FastAPI** on **Google Cloud Run**, utilizing **Firebase** for **NoSQL** state management, OpenAI APIs for intelligence, and **Google Pub/Sub** for scalable event handling.

EDUCATION

B.Comm — Mar 2006 - Mar 2009
